ABSTRACTED-PUB-NO: NL 1013411C  
BASIC-ABSTRACT:

NOVELTY - Confectionery blocks (4) are arranged in rows and columns on top of an inlay (2), the blocks having a shape that enables them to rest on top of the inlay in a stable manner in at least two configurations. In one configuration the visible top sides of the blocks are all identical, whilst in a second configuration there is a contrast between the visible top sides of some of the blocks, in order to show a letter of the alphabet.

USE - These products, normally made from chocolate, are traditionally eaten around Christmas time in the Netherlands.

ADVANTAGE - A shopkeeper does not have to buy in large numbers of different letters, since the product can be configured to form any letter of the alphabet. The individual pieces also makes the product easier to eat, especially for elderly people.

DESCRIPTION OF DRAWING(S) - Figure 1 shows a perspective view of the confectionery product without the packaging, and figure 2 shows a perspective view of one of the confectionery blocks.
